

**What is a modular system?**

Modular systems provide a huge range of modular components which are precision- manufactured off-site to an exacting standard, delivered to site and then assembled on-site. This means factory- controlled quality, faster installation, less mess, less waste and less energy consumption than products which are fabricated on-site.

**Why use Aluminium?**

Aluminium with is a great building material for many reasons: it provides maintenance-free durability and is also non-toxic, corrosive-free, non-combustible and 100% recyclable. It's also lightweight yet strong, which makes Techdek an ideal specification for applications such as roof access walkways. Aluminium's aesthetically pleasing properties can be further enhanced with coating or anodisation.

**Do neaco install the product as well as supply it?**

Yes, we provide a full installation service in addition to technical support and consultation throughout the specification process. Our team of experts is always on hand to assist at every stage.

**Do neaco offer bespoke solutions?**

Yes, absolutely. Over the years we have worked with numerous architects and designers to incorporate bespoke features outside of our standard specifications, including grilles installed at unusual angles and specially developed solar shading louvres in a powder coated finish to match the colour scheme of the building. To accommodate existing building features we can manufacture grille panels with bespoke cut-outs to allow obstacles to pass through. We pride ourselves on the flexibility and adaptability of our technical support services, so please feel free to discuss your particular requirements with one of our team.
